PROFESSIONAL SUMMARY

AI student at Deggendorf Institute of Technology with hands-on production experience in LLM pipelines (LangGraph, RAG, multi-agent systems) and deep learning. Built a multi-tenant B2B triage platform with privacy-first PII scrubbing and tenant-scoped vector stores. Co-founded a software agency that shipped 16+ applications to 40,000+ users across 12 countries. Seeking a Working Student or Internship in Fields/Sub-Fields related to AI in order to move from prototypes to production-scale systems.

EDUCATION

B.Sc. Artificial Intelligence Oct. 2023 – Present

Deggendorf Institute of Technology, Deggendorf, Germany — one of Bavaria's leading applied sciences universities with a dedicated AI faculty

- Focus Areas: Data Science and Applications, MLOps, Computer Vision, Retrieval Augmented Generation, LLM Applications, Data Privacy & PII Scrubbing, Event-Driven Architecture
- Relevant Coursework: Calculus 1/2, Statistics and Probability, AI Programming, Machine Learning, NLP, Deep Learning, Big Data, Autonomous Robotics
- Oskar-Karl Scholarship Recipient
- Took Part in DevPost Google GEMINI XPRIZE Hackathon

B.Sc. Computer Science (4 semesters, not completed — transferred) Sep. 2021 – June 2023

FAST-National University of Computer & Emerging Sciences, Islamabad, Pakistan

- Completed 4 semesters; continued through the second year while awaiting visa processing for DIT to avoid a gap in studies before transferring.
- Received 50% Scholarship to help with my studies due to above average performance
- Took Part in multiple Conventions(Nascon, Animecon, Summercon) and Hackathons(Codeforces, Mindstorm Rookie Gamejam, Mindstorm Summer of Code)
- Did multiple Internships on Game Development and developing Gamified Applications at Mindstorm Studios Lahore (06/2022 – 10/2022, 06/2023 – 10/2023)
- Part of Google Developer Student Club FAST Chapter
- Part of FAST Computing Society

Cambridge International Examinations - A Levels Sep. 2019 – June 2021

Edward's College, Peshawar, Pakistan

Cambridge International Examinations - O Levels Sep. 2017 – June 2019

Edward's School, Peshawar, Pakistan

- Made Head Proctor overlooking multiple responsibilities
- Part of Literature Club

PROJECTS

Triage AI: B2B Autonomous Workflow Triage Suite May 2026 – June 2026

github.com/C6Sucrose/Triage-AI

- Engineered an open-source, multi-tenant B2B automation platform triaging customer support emails via LangGraph state machines and RAG, enforced regex PII redaction before Llama-3 inference, processing 100% of requests with zero data leakage.
- Deployed tenant-scoped ChromaDB and Supabase (PostgreSQL with RLS); automated Trello ticket execution via REST APIs secured by Clerk JWTs, reducing manual triage time by ~68%.

Tech Stack: Python, TypeScript, Next.js 14, FastAPI, LangGraph, Llama-3, HuggingFace, ChromaDB, Supabase, Docker, GitHub Actions

ANON4REID — Privacy-Utility Trade-off Benchmark for Person Re-Identification May 2026 – June 2026

github.com/C6Sucrose/anon4reid

- Designed and implemented a 4-level image anonymization pipeline (Gaussian Blur, SD Inpainting, ControlNet RAD, Canny Edge) applied to all 36,036 images of the Market-1501 dataset
- Built a dual-track evaluation framework measuring ReID utility (OSNet, mAP/CMC) and privacy leakage (MobileNetV2 adversarial classifier, 750-class identity prediction)
- Discovered that the privacy-utility trade-off is a cliff, not a curve — face blur retains 80.9% utility but leaks 88.66% of identities; body-level methods achieve 99.85% privacy but destroy utility to <2.3%
- Generated GPU-bound datasets on Kaggle (dual T4/P100), processing ~108,000 anonymized images across 3 pipeline variants
- Built an interactive Streamlit dashboard for trade-off visualization with dual-axis charts, side-by-side image comparison, and CMC curve analysis
- Authored a 70-point LaTeX report and a 21-slide reveal.js presentation with inline SVG diagrams

Tech stack: Python, PyTorch, Stable Diffusion, ControlNet, LCM-LoRA, MediaPipe, OpenPose, torchreid (OSNet), MobileNetV2, Streamlit, Kaggle, LaTeX, reveal.js

Kepler Object of Interest (KOI) Evaluation Pipeline Mar. 2026 – Apr. 2026

github.com/C6Sucrose/NASA-Kepler-Object-Classification-Pipeline

- Designed an intelligent classification system for verifying celestial bodies as KOIs using NASA Kepler Database; conducted extensive EDA and feature engineering across 9,500+ samples.
- Achieved 98.97% balanced accuracy, outperforming the Naive Bayes baseline by ~31 percentage points using XGBoost after systematic hyperparameter tuning.

Tech Stack: Python, Pandas, NumPy, Scikit-learn, XGBoost, Matplotlib, Seaborn, Jupyter

Autonomous Agentic Migration Foundry (Java → Python) Sep. 2025 – Dec. 2025

https://github.com/C6Sucrose/Legacy-Zero--Autonomous-Migration-Foundry

- Built a highly reliable LLM-based code migration framework using Massively Decomposed Agentic Processes (MDAPs) and Abstract Syntax Trees (Tree-sitter) to decompose large codebases into atomic subtasks.
- Achieved a 96% syntax validity rate vs. 61% for single-agent baseline — a 57% relative improvement on long-horizon migration tasks — via a multi-agent statistical voting mechanism.

Tech Stack: Python, LangChain, OpenAI API, Tree-sitter, Multi-Agent Systems

Deep Learning for Ocular Health Diagnosis Apr. 2025 – June 2025

github.com/C6Sucrose/Ocular-Health-Analysis-and-Generation

- Developed a deep learning system classifying 10 eye diseases across 45,000+ images; built automated preprocessing and labeling pipelines guaranteeing 100% data integrity before training.
- Employed CycleGAN for synthetic data augmentation; trained CNN models (EfficientNetB0, ResNet18) achieving 98.32% balanced accuracy and 96.22% generative confidence; deployed via Tkinter GUI.

Tech Stack: Python, PyTorch, TensorFlow, CycleGAN, EfficientNetB0, ResNet18, Tkinter

Business Intelligence & Organizational Governance Study — Systems Limited Feb. 2023 – June 2023

- Conducted in-depth stakeholder interviews with a Project Manager at Systems Limited (Islamabad), a publicly listed IT services corporation, analyzing internal organizational management, project governance frameworks, and cross-departmental decision-making workflows.
- Delivered multiple formal presentations and facilitated recurring meetings with Systems Limited's management team throughout a 5-month research engagement, maintaining sustained cross-organizational communication.
- Synthesized qualitative research findings into structured BI deliverables documenting enterprise-scale management practices, resource allocation strategies, and operational coordination processes.

WORK EXPERIENCE

Software Engineer / Co-Founder Oct. 2023 – Jan. 2025

Eule (Fiverr/Upwork Agency) — Islamabad, Pakistan

- Shipped 16+ full-stack applications (React/Flutter, GCP, AWS S3) serving 40,000+ end users across 12 countries (US, Germany, Japan, Canada, Brazil, UK, Oman, Romania, Lithuania, Netherlands, Saudi Arabia, France, Italy, Pakistan).
- Grew inherited client apps by an average of 13% in active userbase through performance optimisation, UX improvements, and targeted feature releases.
- Developed custom operational dashboards visualising userbase metrics; extracted and analysed payment and billing data via Stripe and RevenueCat to track monetisation KPIs and platform health.
- Orchestrated the full Software Development Lifecycle across all 23 client engagements — from requirements to deployment — achieving a 100% on-time delivery rate through rigorous QA and monitoring.

Prior: Junior Developer Apprenticeship at Mindstorm Studios (Unity3D, cross-platform development, team delivery under deadlines) — June 2023 – Oct. 2023

TECHNICAL SKILLS

Programming Languages: Python (Advanced), SQL (Advanced), TypeScript (Intermediate)

AI / ML Skills: Pandas, NumPy, Scikit-learn, TensorFlow (Keras), PyTorch, LangChain, LangGraph, CrewAI, Hugging Face, Matplotlib, Seaborn, Plotly, Statsmodels, PySpark, Claude / Claude Code, Codex, llama.cpp, Agentic Engineering / Agentic Coding, Anthropic SDK, OpenAI SDK, MCP Server Development, Agent Skills and Tools Development, Prompt Engineering, Model Optimization

Web & API Frameworks: FastAPI, Streamlit, React, Next.js, Playwright, BeautifulSoup, Web App Development

MLOps & DevOps: Docker (Compose), Kubernetes (introductory), GitHub Actions, MLflow, Airflow, Prometheus, LangSmith, Weights & Biases, Google Cloud Platform (GCP), AWS (SageMaker, Bedrock), PowerBI, UI & API Development, Workflow Automation / Process Automation, Technical Documentation, User Support / AI Onboarding, Github Copilot, Cursor, Edge AI / Edge Inference,

Databases & Vector Stores: Supabase (PostgreSQL / pgvector), Firebase, Snowflake, ChromaDB, SQLAlchemy (ORM)

Soft Skills: Multicultural Teamwork, Translating Theory to Practice, Self-Directed Execution & Analytical Problem-Solving, Initiative & Process Improvement, Research Curiosity & Continuous Learning, Pragmatism & Solution-Oriented Thinking

CERTIFICATIONS

- NVIDIA: Exploring Adversarial Machine Learning
- NVIDIA: Fundamentals of Accelerated Computing using CUDA
- NVIDIA: Generative AI with Diffusion Models
- NVIDIA: Getting Started with Deep Learning
- NVIDIA: Transformer-Based Natural Language Processing
